WHY INFOR XA CUSTOMERS CHOOSE MV2 MES FOR XA
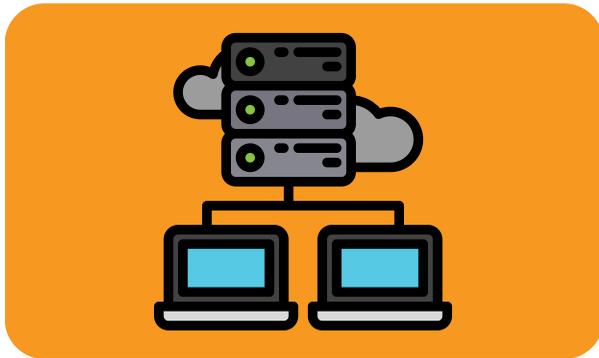

An "Undeniable" Choice

Integration versus Interface — Know the Difference!

Customers considering the purchase of a non-Infor product must understand the way in which the product communicates with XA. The communication link can be 'simple' versus 'robust'.

These rules and configuration settings affect every handshake between systems. Shortcomings and limitations of an "interfaced" system will not be experienced until after the implementation process has begun, at which time more costs and time are incurred prior to the system being functional in the production environment.

Simple

Powerful

VS.

- An interface where data is handed from one software product to another, often in unedited form
- Can generate additional work, like validation checking and error correction

- An integrated communication link that respects the customer's configuration settings and validations
- See back of page for examples of this MES Solution
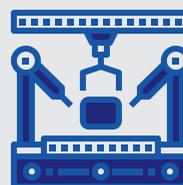

Business Benefits of MES for XA

Always-On Performance Monitoring

Hybrid Cloud Capable

Built For Scalability

Machine Integration

ERP Portability

Modular System Design

OUR MES IS "PREBUILT" FOR INFOR XA

XA customers choose MV2 MES because of its integration to XA

Real-time updates from/to the XA database including:

- Changes to MO/PO/BOM/Routings are passed automatically between applications

We respect XA's configuration settings and validation requirements:

- Location quantity parameters
- Batch/lot control requirements
- FIFO requirements
- Inspection requirements
- Allowable workcenter reporting methods

Status of:

- Employees
- Manufacturing orders
- Operations
- Purchase orders

XA customers choose MV2 MES because of its new technology

- Cutting edge with industry standards and best practices
- Enables deployment over multiple interfaces (touchscreen, tablet, smartphone, etc.)
- Utilizes Microsoft SQL & .NET
- Smart Manufacturing/Industry 4.0
- Hybrid Cloud
- IIoT

XA customers choose MV2 MES because it improves their shop floor

- Supports plant floors running 24x7x365 even if XA, or the iSeries, is unavailable
- Provides a common interface throughout the application
- Integrates quality and lean reporting with production operation
- Enables a "management by exception" environment

XA customers choose MV2 MES because it improves XA

- Backflush material by operation Identify additional point of use stocking locations
- Create multiple transactions with one event
- Offers genealogy (parent/child) traceability
- Discrete batch/lot traceability
- Adaptable to Infor's power architecture
- Powerful bi-directional integration is accomplished with no customizations to XA
- ISE's MES is an Infor Solutions Partner and supports current and all future release of XA
